

Greenhouse

Introduction

An integration with Greenhouse allows you to read and write information to the ATS. You can request a Partner Ingestion API and Company URL Token to connect to RolePoint.

Required Details

To create an integration, you require the following credentials and information:

- Partner Ingestion API Token
- Company URL Token

To access these tokens, ask your SmartRecruiters representative to enable them. Once enabled:

- Access settings
- Dev Center
- API Credentials (for API token) and Configure Job Board (for URL token)
