

Taleo Enterprise

Introduction

An integration with Oracle's Taleo Enterprise requires version 13 or above with Web Services enabled. This allows read and write access to any Taleo Enterprise.

Required Details

To create an integration, you require the following credentials and information:

- User with System Integrator role permissions
- Username
- Password
- The domain for your Taleo account, for example global.taleo.net

To set up this user, you must have Admin permissions. Then:

- Access Taleo Enterprise Configuration screen
- SmartOrg settings
- User Accounts
- Here you can create a user with the System Integrator role permissions
